

BE-1/BE-1A (DCMI Accessories)

US Version

General Description

The BE-1 is an input connector plate of similar type to the LE-1. It provides a stereo balanced line-level input, permitting professional audio equipment such as mixing consoles, DI boxes or broadcast equipment to be connected. Like the LE-1, it connects to one of the DCM-1's Extension Ports with a single screened CAT-5 cable.

BE-1s may be daisy-chained in the same way as LE-1s, and the two types of plate may be intermixed.

Two industry-standard latching 3-pin female XLR connectors are fitted. Once connected, any audio connected to the BE-1 is treated as any other source and can be routed to any zone in the same manner.
