

NTM-1

Groundloop transformer for PM1122

The Neutrik NTM-1 is an optional balanced microphone transformer for the PM1122 pre-amplifier.

Sometimes, using very long microphone lines can create noise issues. Therefore, the circuit board of the PM1122 has been pre-equipped to accommodate a Neutrik NTM-1 balanced microphone transformer.

A hassle-free solution: the transformer's pin layout fits perfectly on the PCB, all the installer has to do is remove two capacitors and place the NTM-1 on the circuit board.

No more searching for the right accessory – Apart products are available from stock and have been designed to make an installer's life easier!
