

As a leading brand in supporting music education and performance, Superscope is focused on meeting the needs of music educators, musicians, and vocalists throughout the world. Customers' stories and testimonials on our website will explain the many ways our products are used, and why our customers enjoy using our products and have such a high level of satisfaction.

Whether you are interested in a Superscope PSD digital recording system or our exclusive Elevation™ software, we promise to deliver easy-to-use, high quality products and personal customer support.

Superscope. We're All About the Music!

making it easy
to record your
beautiful music

beautiful

music

Meeting the needs of music educators, musicians, and vocalists throughout the world with easy-to-use, high quality, recording systems and software.

SUPERSCOPE®

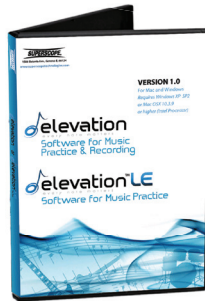

Easy technology, so you can make beautiful music.

Elevation™ Software

PSD400 Series Digital Recording Systems

Elevation software from Superscope, is in many respects similar in function to our PSD digital recording systems.

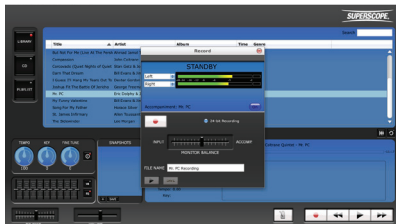

The Elevation Library easily handles common file formats AIFF, MP3, WAV and WMA. Import music from compact disc or music downloads from your computer. Loop sections of audio in any key or tempo and save as Snapshots. Record live or with accompaniment files. Make a playlist for CD burning, export files for e-mailing or send to a USB thumb drive.

Unlike common digital media players, Elevation combines an easy-to-use interface for music learning and a stereo recorder in a cost effective software package.
