

This wall bracket can be used with our MASK12 speaker or other compatible speakers up to 40 kg. To install the MASK12 speaker on the bracket, remove the center M10 bolt from the bottom of the speaker. Attach the pole mount (supplied) securely by fastening the mount on the speaker.

Fix the wall plate on a sufficiently strong wall using all 6 mounting holes. Always use mounting hardware (not supplied) capable of supporting the load safely. The speaker arm can be swiveled over a 180° angle from left to right and can be tilted down up to 20° by turning the tilt screw. Mount the speaker with the attached speaker pole mount on the bracket and secure it by tightening the lock screws.

For additional safety, we strongly advise to secure the speaker using a safety chain. The chain and the necessary mounting hardware(eyebolts) are not supplied with this bracket. The chain and the attachment eyebolts should be capable of supporting 12 times the weight of the speaker. Mount the safety chain in such a way that the speaker or the supporting hardware won't drop more than 20 cm.

Technical specifications

Material	steel, powder coated black
Capacity	up to 40 kg
Pole mount adapter	35 mm diameter with M10 bolt and lockscrew
Shipping dimensions (w x h x d)	130 x 290 x 450 mm
Net weight	2.5 kg
Shipping weight	3.0 kg
