

# SYSTEM DESIGN GUIDE

## MEETING ROOM WITH TABLE MICS

biamp.

Biamp's meeting room solutions scale to bring clear communications and ease of deployment to any type of meeting room. Using our [conference room designer](#) it's simple to choose the right equipment configuration, whatever your needs.

Parlé™ Microphones dynamically track and mix voices without any beam setup and Desono™ loudspeakers, matched with Biamp's compact PoE+ amplification technology, are optimized to reproduce human speech. Biamp Launch takes care of the rest with its one touch device discovery and tuning process.

### KEY TECHNOLOGIES

- Parlé Beamtracking Microphones identify and track voices removing the need for mic beam setup and allowing for natural sounding conversations.
- Biamp's next generation of X Series signal processors feature streamlined hardware designs, more power, and integrated connectivity for our PoE+ driven peripherals. They simplify system designs and speed up deployment.
- Connect to any UC platform using our certified USB interfaces for mute sync and enhanced acoustic echo cancellation.
- Biamp Launch enables unbeatably fast room deployment with zero programming and automatic room tuning completed in under 5 minutes.
