

**Instructions for attaching rack ears to the PV®14AT, PV®14BT, PV®10AT, and PV®10BT Mixers.**

Remove screws from each end of mixer at the locations shown and remove end bells. Align holes in rack ears with holes from which the screws have been removed. Install the rack ear with the included screws and tighten securely, but do not over tighten.

Remove mixer end bells by removing the highlighted screws.

NOTE: For both sides of the unit it is the same process. We recommend completing one whole side before beginning the other.

NOTE: While mixer end bells are completely off try and avoid touching any internal components.
